Abstract
Background
Eosinophilic esophagitis (EoE) involves a chronic immune-mediated response to dietary antigens. Recent work identifies T-cell clonality in children with EoE, however, it is unknown whether this is true in adults or whether there is a restricted food-specific T-cell repertoire. We sought to confirm T-cell receptor (TCR) clonality in EoE and assess for differences with specific food triggers.
Methods
Bulk TCR sequencing was performed on mRNA isolated from esophageal biopsies

1. SUBMISSION
Most CA: A Cancer Journal for Clinicians articles are solicited reviews. With the exception of the American Cancer Society's Cancer Statistics articles, original research articles submitted for publication are generally not accepted for peer review. Case Reports and Letters to the Editor will not be considered for peer review or publication. All unsolicited manuscripts must be approved by the Editors before submission.
Pre-submission Requirements: Unsolicited Manuscripts
CA requires pre-submission correspondence (consisting of an outline and abstract describing the proposed article) for review by the Editors before any unsolicited manuscript can be submitted for peer review. All unsolicited manuscripts submitted without the Editor's approval of a pre-submission outline and abstract will be returned without review. Please e-mail an abstract, full author list, manuscript length, and information about the author to the Editorial Office for consideration (see Editorial Office contact information below).
All submissions should note the following:
1) CA's audience includes colleagues outside of oncology, notably primary care providers, and outside of medicine, including public health professionals. All manuscripts should be written in a way that is accessible and understandable to this wide audience group.
